CC105 PEER CODE AUDIT EVALUATION FORM

=====

Author Name : Emmanuel M. Turingan

Reviewer Name : EJ T. Garcia

Date of Audit : October 5 2026

Repository Link: https://github.com/Garcia-EJ/Laboratory_5

- 1. IDENTIFIED STRENGTHS (At least 3 positive engineering practices observed)

[1] The program separates tasks into different functions, making the code organized and easy to understand.

[2] The program uses dynamic memory arrays so the storage capacity can increase when needed.

[3] Variables such as currentCount, Maxcapacity, and dataArray clearly describe their purpose.

2. IDENTIFIED WEAKNESSES / DEFECTS (At least 3 structural or style issues)

[1] The old Array is not deleted when the array is resized, causing unused memory to remain allocated.

[2] Remove _item-at() does not properly check the index.

[3] printAll() uses $i \leq \text{currentCount}$, which can access memory outside the valid array.

3.RECOMMENDED ACTIONABLE IMPROVEMENTS (At least 3 recommendations)

[1] uses delete[] when replacing or finishing with dynamic array to prevent memory leaks

[2] Check that indexes are within the valid range before accessing or removing elements.

[3]Change <= to < where necessary to prevent out-of-bounds access and improve program safety.

DEVELOPER ACTION & REJECTION JUSTIFICATION (To be filled by Author)

Recommendation [1]: [ACCEPTED] – Added proper memory management using delete[] to prevent memory leaks when resizing and when the program exits.

Recommendation [2]: [ACCEPTED] – Added index validation in remove_item_at() to prevent invalid and out-of-bounds access.

Recommendation [3]: [ACCEPTED] – Fixed the loop condition in printAll() from <= to < to prevent out-of-bounds memory access.
