

PART E: Peer Review Evaluation Form

CC105 PEER CODE AUDIT EVALUATION FORM

Author Name : [EJ T. Garcia]

Reviewer Name : [Emmanuel M. Turingan]

Date of Audit : October 5, 2026

Repository Link : https://github.com/Garcia-EJ/Laboratory_5

1. IDENTIFIED STRENGTHS (At least 3 positive engineering practices observed)

- [1] Enforced RAII by placing delete[] inside the class destructor (~DynamicArray()).
- [2] Replaced raw pointer global states with clean C++ class encapsulation.
- [3] Applied input validation checks for upper/lower bounds in deletion methods.

2. IDENTIFIED WEAKNESSES / DEFECTS (At least 3 structural or style issues)

- [1] Matrix processing routine does not support templated numeric data types yet.
- [2] Copy construction is disabled rather than implementing deep copying (Rule of Three).
- [3] Missing automated unit test macro runner (e.g., GoogleTest framework).

3. RECOMMENDED ACTIONABLE IMPROVEMENTS (At least 3 recommendations)

- [1] Implement dynamic template support <typename T> for generic data handling.
- [2] Add a shrink_to_fit() method to free unused capacity when count drops.
- [3] Mark all non-modifying member functions with explicit const qualifiers.

DEVELOPER ACTION & REJECTION JUSTIFICATION (To be filled by Author)

Recommendation [1]: [ACCEPTED] Will extend dynamic array to template class in Milestone 1.
Recommendation [2]: [ACCEPTED] Kept manual capacity controls for Milestone 1 scope.
Recommendation [3]: [ACCEPTED] Added const specifiers to all accessor and print methods.
